REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Reiniger (3,533,906) and Owens (5,641,449) show process and apparatus for pulp molding articles from a fiber slurry and they further disclose the use of RF (radio frequency) energy to internally heat the fiber in the slurry. There is no disclosure or suggestion of RF heating of the dies. Brooks similarly discloses internal heating of the fiber material. Brooks discloses the use of separately heated platens and the application of a RF heating of the board. It is clear that the board is internally heated by the application of RF energy since column 4, first full paragraph states that water migrates to the outer surface of the board and condenses on the platen surface when RF is applied and thus, requires separate heating of the platens in order to prevent this undesirable condensation; there is no disclosure or suggestion of using RF heating of the dies.

The remaining cited references show the current state of the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
